REVISION TO 516.
TISSUE=Ovary;

Submitted (JUN-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: REGULATES MICROTUBULE DYNAMICS DURING MITOTIC SPINDLE
-!- SUBCULIED FOR BOTH ESTABLISHMENT AND MAINTENANCE OF
MITOTIC SPINDLES. MAY ACT DIRECTLY ON MICROTUBULES, CAUSING A
DESTABILIZATION AND EVENTUAL DEPOLYMERIZATION OF THE MICROTUBULE.
-!- SUBCULIT BENEALING (POTENTIAL)

SUBCELLULAR LOCATION: Nuclear and cytoplasmic. SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY. MCAK/KIF2 SUBFAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Name=2; Synonyms=TS-MCAK;
IsoId=Q99661-2; Sequence=VSP 002866;
TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN THYMUS AND TESTIS, AT LOW LEVELS IN SMALL INTESTINE, THE MUCOSAL LINING OF COLON, AND PLACENTA, AND AT VERY LOW LEVELS IN SPLEEN AND OVARY; EXPRESSION IS NOT DETECTED IN PROSTATE, PERIHERAL BLOOD LEUKOCYTES, HEART, BRAIN, LUNG, LIVER, SKELETAL MUSCLE, KIDNEY, OR PAMCREAS.
SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY. MCAK/KIF2 SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: Cytoplasmic and nuclear ALTERNATIVE PRODUCTS:
